Occupational Pneumoconiosis Board

Overview

The Occupational Pneumoconiosis Board schedules examinations for all persons filing occupational pneumoconiosis claims with the Insurance Commission. The Board makes impairment determinations based on available claim related medical evidence.

The Board obtains a complete medical history of the claimant, including any treatment for heart and lung disorders and other conditions that restrict the persons' activity. The medical history includes current and past tobacco use and to what extent. Clinical members of the Board conduct a physical examination of the claimant, giving special attention to heart and lungs, as well as any disabling injuries. Under close supervision, claimants able to exercise safely, perform a simple, standardized exercise test.

Chest X-rays are made under the supervision of the radiologist members of the Board, following film quality and technical standards established by the *Federal Coal Mine Health and Safety Act of 1969* to detect even minute changes possibly due to pneumoconiosis.

Board members are thoroughly familiar with identifiable diagnostic changes shown by X-rays of the claimant for evidence of changes occurring over time.

The Occupational Lung Center at Charleston Area Medical Center performs pulmonary diagnostic testing for the Board and reports on loss of lung function and to the extent to which lost lung function impairs the claimant's ability to work.

The 2020/2021 Occupational Pneumoconiosis Board Annual Report

Activity	July 1, 2019 to June 30, 2020	July 1, 2020 to June 30, 2021
