Medical Malpractice Report

Insurers with 5% or more of the Medical Malpractice market share in West Virginia

Provided by the West Virginia Offices of the Insurance Commissioner

November 2015

The West Virginia Offices of the Insurance Commissioner has prepared this report on Medical Professional Liability Insurance to fulfill the requirements and intent of West Virginia Regulations §114CSR22, §114CSR23, West Virginia Code §33-20B-6, and §33-20B-7. The information used in the preparation of this report encompasses the experience found in the statutorily required "filed information" of those insurers with a 5% or greater written premium market share, the rate filings of those companies, National Association of Insurance Commissioners (*NAIC*) supplementary information, Insurance Services Office (*ISO*) loss cost filings and other *ISO* reports, *A. M. Best* reports, data collected in accordance with §33-20B-8, and data from the West Virginia Board of Medicine.

A "*claim for medical malpractice*"¹ means a claim arising out of the rendering of, or the failure to render, medical care services. An "*action of medical malpractice*" is a tort or breach of contract claim for damages due to the death, injury, or monetary loss to any person arising out of any medical, dental, or surgical diagnosis, treatment, or care by any provider of healthcare.

In any action for the recovery of damages based upon medical malpractice, a claimant has the burden of proving the alleged actions of the healthcare provider represented a breach of, or failure to meet, the prevailing standard of care for that type of healthcare provider. The prevailing professional standard of care for a given healthcare provider is the level of care, skill and treatment which, in light of all relevant surrounding circumstances, is recognized as acceptable and appropriate by reasonably prudent similar healthcare providers.

The medical malpractice insurance market has gone through three challenging periods or "hard" markets during the past thirty years. The first medical malpractice pivotal period occurred in the mid-to–late 1970s with a second occurrence repeated in the mid-1980s. The most recent challenging period began in early 2001. This hard insurance market was driven by a number of factors²:

¹ 2003 University of Central Florida <u>Governor's Select Task Force on Healthcare Professional Liability Insurance</u>

² July/August 2004 Contingencies Magazine (<u>www.contingencies.org</u>), <u>The Medical Malpractice Market: From National Dominance</u> to Regional Focus, Kevin Bingham.

- Rising loss trends;
- ➢ Higher and more volatile jury awards;
- Adverse reserve development on prior accident/report year reserves;
- Reduced carrier capacities;
- Rising cost and availability of reinsurance;
- Varying success of tort reform packages in multiple states (*e.g., constitutionality, ability to pass reforms*); and
- Declining investment returns.

West Virginia's medical malpractice insurance results have been favorable compared to the last "*hard*" market period in early 2001. Rate level changes which were approved during the last hard market, the passage of H.B. 601 and H.B. 2122 creating the policyholder owned *West Virginia Mutual Insurance Company* have all contributed to the change in the Medical Malpractice Liability results in West Virginia. In 2014, the overall loss experience increased slightly while still experiencing continued rate stabilization (*i.e. little to no changes*) from the major admitted writers in West Virginia. From 2004 to 2014, the pure direct loss ratio for Physicians and Surgeons averaged 33.9%. In 2014 that ratio was 55.8% as opposed to 36.5% in 2013. Conversely, between the years of 1994 and 2003, that average loss ratio was 89.25%.

This year's report covers the following medical malpractice insurance areas:

- <u>Section I:</u> An overview of the Industry's *by-line* insurance results in 2014 together with a *comparison* of Industry results and West Virginia results for the Medical Malpractice Insurance line.
- Section II: A review of §33-20B-8 closed claim data and the West Virginia Board of Medicine paid claim data covering 1994–2014.
- <u>Section III</u>: A *fulfillment of the legislative requirements* examining market positions, rating plans and rules, and a comparison of filed information to rate filings and financial statement information. This section includes a commentary concerning Joint Underwriting Associations pursuant to §33-20B-7. A review of rate filings and investment returns is also provided, as well as a sample comparison of currently approved physician and surgeon's rates in West Virginia.
- <u>Section IV</u>: A review of Medical Liability Fund data, Board of Medicine licensure data, and other claim data gathered from company financial statements.
- <u>Section V:</u> Summary observations.

The overall goal of this report is to provide the reader with insight into the current Medical Malpractice Insurance market in the State of West Virginia.

Overview

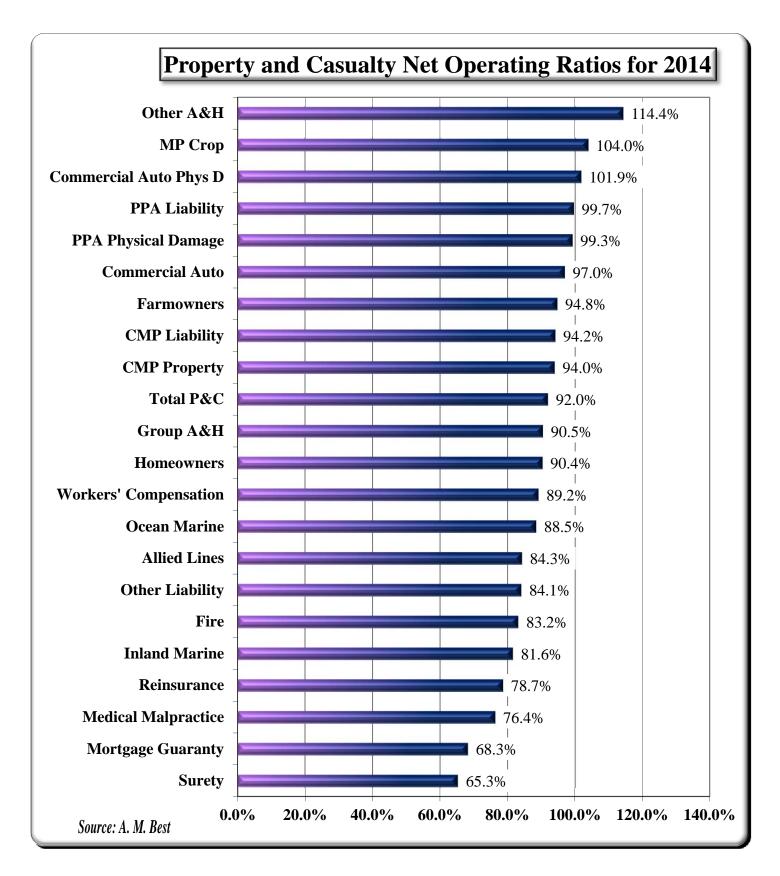

I. Overview of Countrywide P&C Insurance Industry Results for 2014

Experience for the combined <u>all lines</u> property and casualty insurance industry rose slightly in 2014 from 2013. The overall net operating ratio was 92% in 2014 as opposed to 89.4% in 2013. Medical Malpractice saw a similar change with the ratio increasing from 73.1% in 2013 to 76.4% in 2014.

The combined all lines property and casualty insurance industry operating ratio for 2014 was 92.0%. This net operating ratio reflects the results after paying/reserving for all claims and claim expenses; paying underwriting expenses and dividends; paying and collecting on reinsurance agreements; and accounting for investment gains/losses.

The 2014 net operating experience of the Property and Casualty Industry as compared to some of its key element lines were as follows:

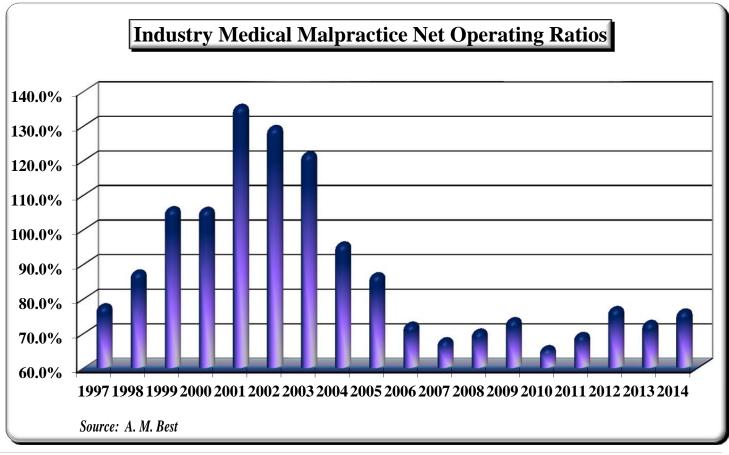

Several points can be noted from the industry results for 2014:

- The highly adverse impact of the national financial crisis upon the Financial and Mortgage Guaranty lines, having begun in 2008, is shown to have subsided. In 2010, the net operating ratio for Mortgage Guaranty was 151.5% and Financial Guaranty was 196.1%. Mortgage Guaranty was 68.3% in 2014.
- Reinsurance industry results, which can influence future outcomes for other lines of business; rose from 63.7% in 2013 to 78.7% in 2014. The net operating ratio for reinsurance had been 234.3% in 2005. The need for a healthy reinsurance market is important for a line like medical malpractice with the potential for large losses. While the results were worse in 2014 than 2013, the ratio is still at an acceptable level.
- The results for the medical malpractice line are favorable. The market remains stable as it has for several years now.

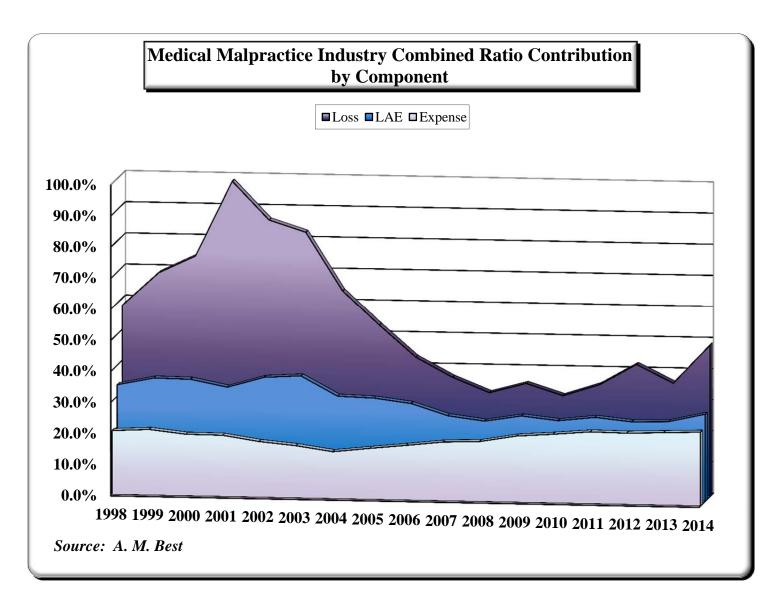

I-A: Medical Malpractice Insurance Results for the Industry

Medical Malpractice has continued to show overall improvement since the adverse level in 2001, and is now performing well below the total combined industry results. The graph below displays industry net operating ratios occurring since 1997:

This chart displays the combined ratio contribution by component excluding investment income:

LAE = Loss Adjustment Expense, also known as Direct Cost Containment Expense (DCCE) which are those expenses such as outside attorney costs and necessary court fees that can be directly tied to a specific claim. Refer to the Glossary for more information.

Profitability for medical malpractice writers can be examined in the following table. Profitability can be volatile from year to year, thus *it is important to look at a number of years:*

	Profitability - 246 Medical Malpractice Organizations														
	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014
Net Income (\$M)	\$523	(\$263)	(\$782)	(\$544)	\$77	\$652	\$1,615	\$1,844	\$1,272	\$1,732	\$2,079	\$2,061	\$1,796	\$1,547	\$1,698
Surplus (\$M)	\$7,102	\$6,678	\$5,786	\$6,150	\$6,638	\$7,195	\$7,958	\$10,790	\$10,772	\$12,464	\$13,549	\$14,601	\$16,111	\$17,788	\$19,445
Return on Surplus	7.4%	-3.9%	-12.5%	-9.1%	12.0%	9.4%	21.3%	18.4%	11.8%	19.1%	18.0%	14.0%	11.0%	10.0%	9.0%

The above chart (information from A. M. Best) shows that nationwide medical malpractice writers have increased their surplus. Surplus is related to the amount of coverage written. This is another indication that the medical malpractice market is stable.

I-B: Medical Malpractice: Industry vs. West Virginia Comparison

The following exhibits provide a comparison of the Medical Malpractice line of business for the Industry (*Countrywide*) along with results for West Virginia for the past fifteen years. In reviewing this exhibit, a few key areas of difference (*apart from the premium totals*) are noted. An overall decrease in total West Virginia premiums since 2004; greater volatility in direct West Virginia loss ratios and loss adjustment expenses (*due to our relatively small market size*), and an increased return to overall profitability than that which was experienced on a countrywide basis. This data is on a calendar year basis (*as opposed to accident year, in which premiums and losses are tied to the year that claims were made in—See Glossary*). Increases or decreases in loss reserves from previous years will be carried forward to the calendar year on an accounting basis. This can result in incurred loss amounts which may appear inflated or even result in overall negative dollar values for the year. Reductions in prior loss reserves were made in West Virginia during 2008 and in 2012. This resulted in negative loss ratios for the market during those years.

The direct loss ratio on an industry basis remained virtually unchanged from the prior year while West Virginia increased to 55.85% from 36.49%.

Total	\$994,105	\$986,330	47.83%	29.36%	11.88%	89.06%

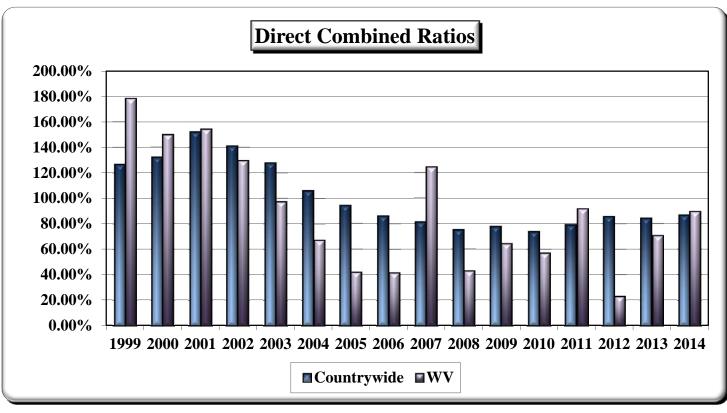

The 2007 West Virginia results on the preceding page appear to be somewhat of an anomaly. Upon a detailed review, the results were largely driven by the exit of two companies from our market during that year. Specifically, *Health Care Indemnity Incorporated (a hospital policy writer, included in the 2006 report with 5.26% market share)* did not renew their hospital policy for 2007 and posted a Direct Defense Cost Containment and Expense incurred amount of \$19.3M for the year. Note that this amount (*\$19.3M*) is 4.7 times larger than their entire earned premium for that same exposure in 2006 (*\$4.1M*), and that the same heavily influenced the LAE ratio noted above as it was more than half of all incurred LAE (*\$30.6M*).

Secondly, *NCRIC*, *Inc.* (*the* 9th *largest admitted writer in West Virginia by market share in 2006, and* 4th *largest in 2004*) fully exited the West Virginia market during 2007, posting negative earned premium figures for 2007 and a direct incurred DCCE figure (\$1.7*M*) that were more than 50% of their last positive earned premium (\$3.3*M*) amounts for 2006. Were it not for the two companies mentioned above leaving our market during 2007, the state-wide results would have been significantly different.

Visually, a comparison of Industry results with West Virginia results for medical malpractice utilizing data from the preceding table can be seen in the three graphs which follow:

A review of the Direct Operating Ratio (*which further reflects Dividends Paid and Investment Gain/Loss*) produces the results which follow:

INDUSTRY (Best's Aggregates & Averages)									
Year	Direct Combined Ratio	Dividend	Combined Ratio (after Dividend)	Investment Gain	Direct Operating Ratio				
2000	132.30%	3.70%	136.00%	5.60%	130.40%

Total	82.37%	1.77%	84.14%	4.55%	79.59%

The figures above demonstrate that after accounting for dividends and investment gain, medical malpractice produced an *operating profit* in West Virginia from 2004 to 2006 and again in 2008 through 2014. The market remains profitable and notably more profitable overall than that of the countrywide average over the period shown above.

Examining the average percent of LAE (DCCE) to loss for the most recent three year, five year and ten year periods utilizing NAIC state level data demonstrates that although historically volatile on a year to year basis, West Virginia results are close to the countrywide average and have generally improved in more recent years.

Understand that the medical malpractice line of business results above include aggregated experience for all of the various sub-lines of Medical Malpractice insurance. Medical Doctors (MD's), Doctors of Osteopathy (DO's) and Surgeons are all generally written under Physician and Surgeon's programs (P&S). Hospitals, due to their size and complexity, are generally written under separate stand-alone programs. Often Dentists, Chiropractors and Nurses have their own specific and individual specialty programs under which those exposures would be written at the exclusion of all other medical professionals.

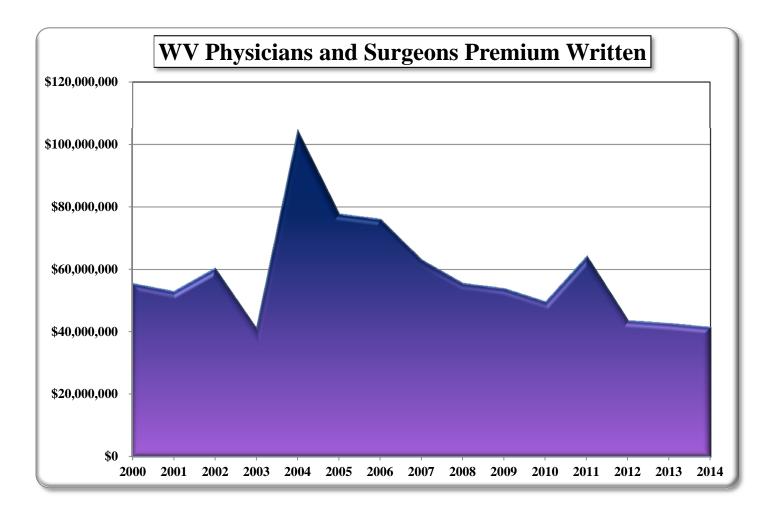

Year	\$ Written	\$ Earned	Loss Inc	Loss Ratio	# Co's

Considering <u>only</u> the Physicians and Surgeons sub-line in West Virginia, the following experience is found:

Looking at Written Premium, you will note a decline from 2000 to 2003, and then a substantial increase in premiums occurring for 2004. As noted earlier, the Medical Malpractice crisis occurred in West Virginia around 2001. At that time, physicians were having a difficult time obtaining insurance in the voluntary marketplace due to the hardening of the market, so they began obtaining coverage through the *Board of Risk and Insurance Management* (BRIM) a state entity that was already writing coverage for teaching hospitals and their staff. Since BRIM is not an insurer, their premiums are not reported here and accordingly as those physicians proceeded to obtain coverage under the BRIM program (*see also section III-B for WVMIC as well as the Glossary*) the reported premium above dwindled. When legislation passed in 2004 creating the *West Virginia Mutual Insurance Company* (WVMIC) however, those physicians (1,382 of them) re-entered the admitted market and the written premiums for that year increased commensurately.

Physicians and Surgeons written premiums in West Virginia have declined substantially and continually since 2004, with 2011 being a sole exception. During 2011 *Everest Indemnity Insurance Company (a non-admitted insurer)* posted written premiums of \$17,279,983 in the physicians and surgeons sub-line, while netting the same amount out by posting written premiums of -\$14,165,279 under the Hospital sub-line and -\$3,114,704 in the Other Healthcare Facilities sub-line. With 2011 being an exception, *Everest* has only shown written premium in West Virginia under the Other Healthcare Professionals sub-line twice (2011 and 2012), but no other medical malpractice written premiums in our market since 2007. Eliminating the physicians and surgeons premium from *Everest* in 2011, the total physicians and surgeons written premiums in West Virginia occurring since 2004.

Graphical representation of the written premium data for the Physicians and Surgeon's market:

I-C: Key Drivers of West Virginia Medical Malpractice Insurance Results

Negative Factors

- Widely volatile Loss Ratio
- Volatile Loss Adjustment Expenses

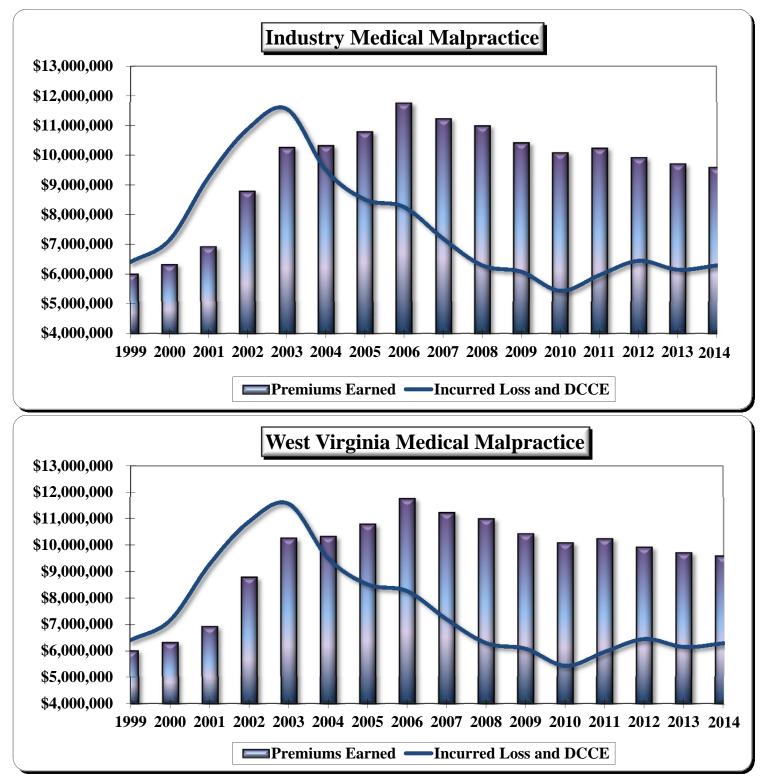

Positive Factors

- General overall decline in Loss Ratio since 2002
- Relatively stable Underwriting Expense
- Favorable and fairly stable Investment Income (*offset*)

Overall, the graph above visually demonstrates a marked and continued improvement over the experience of earlier years for the West Virginia Medical Malpractice market.

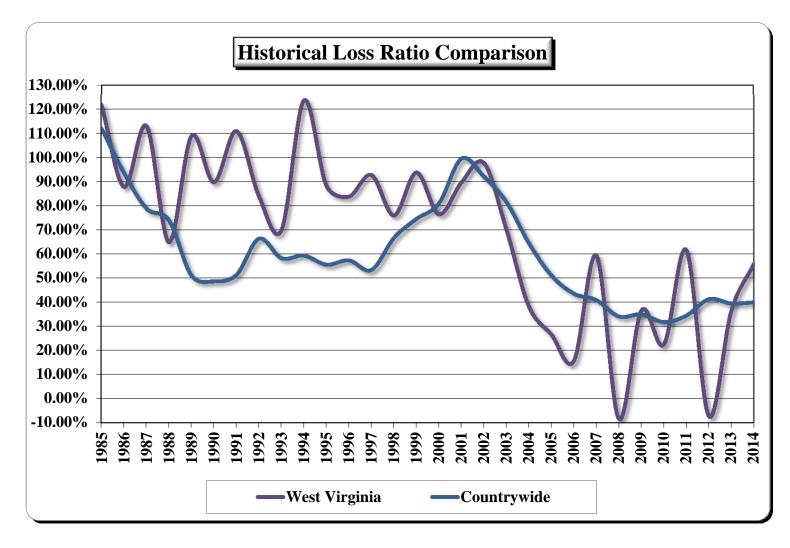

I-D: Loss and Defense Costs Incurred vs. Premiums Earned

The charts below compare losses and defense costs for the Industry (*countrywide basis*) against the comparable figures for West Virginia alone. They show that results for loss and defense cost in West Virginia had far exceeded premiums until the turnaround reported for 2003, and afterward have remained generally favorable overall, yet volatile. *Note that each graph is on a per thousand basis*.

I-E: A Cautionary Note

Recent loss ratio experience in West Virginia for Medical Malpractice remains as an improvement over that experienced as recently as 2002. However, as the graph below (*comparing West Virginia Loss Ratios with those countrywide*) suggests, West Virginia Medical Malpractice loss ratios have not been stable historically. This is likely the result of the limited volume of business written in our market and the potential for significant variance will likely increase if overall premium volumes continue their decline. Accordingly, *rate changes (or stabilization provided by a lack thereof) will likely play an increasingly crucial role for future results*.

Section II

A Review of Paid / Closed Claim Data

II: Analysis of Paid Claim Information

<u>Cautionary note</u>: The Board of Medicine information is not insurance data; rather it is information provided to the West Virginia Board of Medicine about Medical Malpractice claims after their disposition, and as such, it has not been audited for accuracy. "Disposition" in this case means claims which have been dismissed, settled, or adjudicated. These data represent <u>indemnity payments only</u>, thus, loss adjustment expense amounts are necessarily <u>excluded</u>. While not strictly matching insurance data, this information is useful in attempting to identifying trends. It should also be noted that the data does not include hospitals or doctors working within corporate structures. Even with twenty years of data, the number of claims and loss dollars are still small enough to limit the credibility of the information. Additionally note that this information does include BRIM claim payments.

The <u>Closed Claim data</u> discussed in Section II-D should not be considered as final experience data for any given year. §33-20B-8 only requires the reporting of data for claims which are considered to be closed by the insurer. Open claims are therefore necessarily entirely excluded from this dataset, and likewise it is possible that claims which have been administratively closed due to inactivity or apparent abandonment on behalf of the claimant may reopen at a later date and undergo additional development.

<u>Advisory</u>: The sections below which review both Judgments and Settlements with payment where the data is noted to have been <u>capped</u> at \$1,000,000 differs from that included in reports prior to 2007 due to the application of the \$1,000,000 cap. Specifically, the 2004 report only considered Judgments and Settlements <u>under</u> \$1,000,000 (<u>excluding</u> all those above that amount), the 2005-2006 reports continued to provide the data in this manner, but noted it as having been capped at \$1,000,000 (i.e. all individual payment amounts greater than \$1M only count only as \$1M each) as a smoothing procedure. However, only the 2007 and later reports, including this report, actually apply the noted capping methodologies in order to limit large swings in the data from year to year, yet also fully consider indemnity amounts over \$1,000,000 (counted as capped at \$1M) in order to attempt to identify any notable trend in payments. This creates some disparity between the figures provided within this report and that of earlier reports.

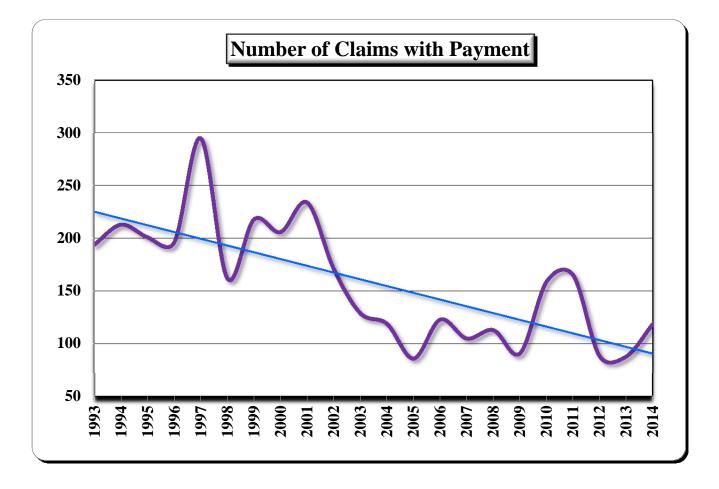

II-A: How Malpractice Claims are disposed in West Virginia

Total	1,514	28%	132	439	8%	3,343	3,381	64%	5,334

The exhibit below displays paid claim count information for 1993 - 2014.

- In 2001, H.B. 601 was passed. One of its key elements was §55-7B-6, requiring that a "certificate of merit" be obtained prior to the filing of a medical professional liability action against a health care provider. Specifically, "[the] certificate of merit shall be executed under oath by a health care provider qualified as an expert under the West Virginia rules of evidence and shall state with particularity: (1) the expert's familiarity with the applicable standard of care in issue; (2) the expert's qualifications; (3) the expert's opinion as to how the breach of the applicable standard of care resulted in injury or death". (Emphasis Added) We believe that this screening process explains in part the increase in the percentage of dismissals seen beginning in 2002.
- Also of important note, as of 2011 the West Virginia Board of Medicine indicates that *the reporting of dismissals is no longer required*. Thus we can no longer fully consider that portion of their data in this report for the future.

- In general, the number of claims filed has dropped significantly since the passage of the 2001 legislation.
- The preceding table shows that the claim count increased in 2014, which mirrors the increase in the overall loss ratio in WV from the previous year.
- Graphically, note the downward linear trend in the number of paid claims since 1997:

This is consistent with previous reports which have noted a general decline in Medical Malpractice claims countrywide. Keep in mind however that medical malpractice is generally written on a claims-made basis. Therefore, it is quite possible that claims could arise in the future which relate to incidents that occurred in the past (*i.e. a claim could be made in 2015 due to an incident which occurred in 2009, etc.*).

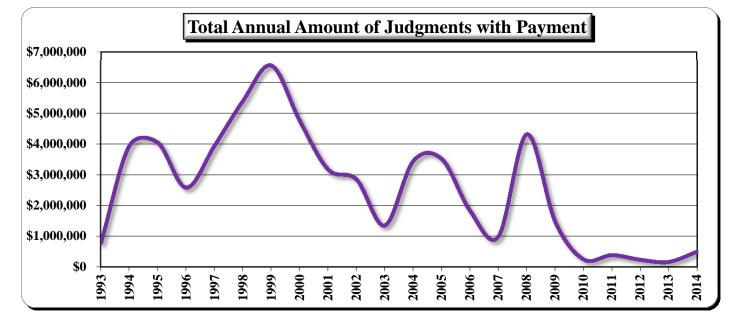

II-B: Historical Judgments

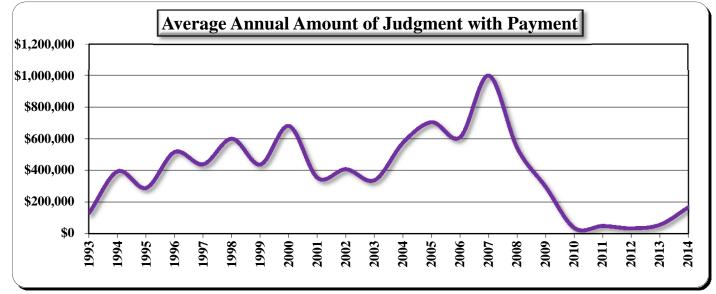

Capping large awards at \$1,000,000 (as a smoothing procedure) leads to the following:

West Virginia Board of Medicine									
Judgments	Judgments with payments capped at \$1,000,000								
Year	#	Amount	Average						
1993	6	\$785,547	\$130,925						
1994	10	\$3,946,419	\$394,642						
1995	14	\$4,055,745	\$289,696						
1996	5	\$2,585,837	\$517,167						
1997	9	\$3,951,907	\$439,101						
1998	9	\$5,409,154	\$601,017						
1999	15	\$6,566,669	\$437,778						
2000	7	\$4,767,554	\$681,079						
2001	9	\$3,179,290	\$353,254						
2002	7	\$2,855,223	\$407,889						
2003	4	\$1,355,000	\$338,750						
2004	6	\$3,456,244	\$576,041						
2005	5	\$3,524,909	\$704,982						
2006	3	\$1,830,989	\$610,330						
2007	1	\$1,000,000	\$1,000,000						
2008	8	\$4,325,596	\$540,700						
2009	5	\$1,475,000	\$295,000						
2010	7	\$250,000	\$35,714						
2011	8	\$390,879	\$48,860						
2012	7	\$237,539	\$33,934						
2013	3	\$170,000	\$56,667						
2014	3	\$504,000	\$168,000						
22 Years	148	\$56,623,501	\$393,706						

- This table shows that even after limiting large awards to reduce volatility, there is no clear pattern of either an increasing number of judgments or a consistent increase in total paid judgments. Rather, the small number of judgments restricts credible inferences.
- A <u>general</u> historical decline in the number of judgments with payment over the period reviewed above can be observed.
- A <u>general</u> historical increase in the average annual amount of judgments with payment until 2007 can also be observed. The increase in the average claim in 2014 mirrors the increase to the loss ratio in 2014.

Number of Judgments with Payment

Graphical linear representations of the preceding tabled data:

It should be noted that the number of judgments in each year is very small and that actual paid amounts • can vary significantly from year to year. For example, the Average Annual Amount of Judgments with payment graphic above appears to indicate a significant increase in this average for 2007. Yet, note in the tabled data that the number of non-zero judgments for 2007 was only 1.

The next exhibit displays Paid Judgments by size of payment.

The next exhibit displays Paid Judgments by size of payment

II-C: Historical Settlements

In a manner similar to judgments, we now look at settlements.

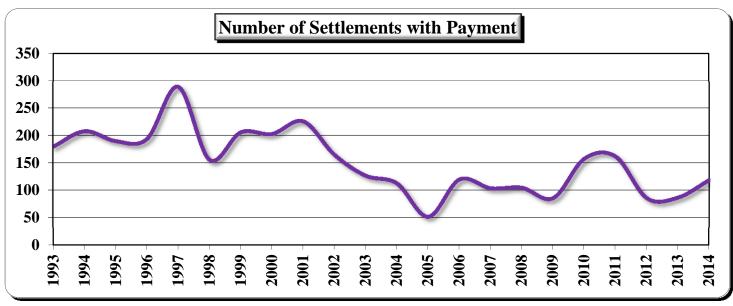

West Virginia Board of Medicine Size of Paid Settlements

As was done for judgments, we will cap claims at \$1,000,000 and look for trends:

- From the above data, which limits claims to \$1,000,000, a general escalation in the average settlement paid is observed until 2003, followed by a general decline and slight rebound for the past two years. In the years 1993-2002 combined the average paid settlement was \$185,535. For 2003-2014 combined, the average paid settlement was \$234,065.
- As with judgments, the small number of settlements restricts the credibility of the data. The actual number of settlements occurring since 2001 indicates a general decline in the frequency of paid settlements.

Again, graphical linear representations of the Settlement data:

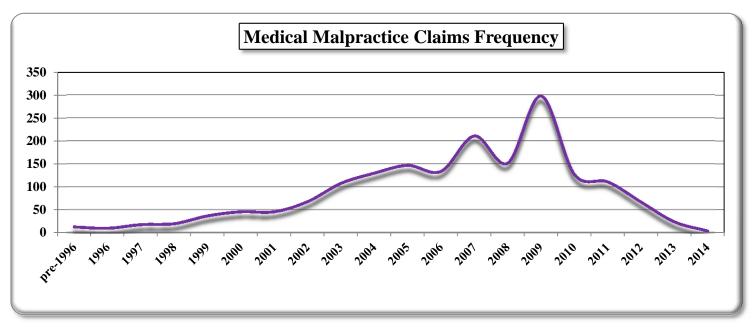

II-D: Closed Claim (20B-8) Data

In accordance with §33-20B-8, enhanced closed/paid medical malpractice information has been collected from insurers. This information includes the physician's primary specialty, the cause of loss, amount paid on defense costs for each filed claim and the split of the indemnity payment between economic and non-economic damages. In review of this data, and examining only physician and surgeon claims, the following general financial overview can be found on an accident year basis (by Date of Injury—D.O.I.).

D.O.I.	Claims	Indemnity Paid	Economic Damages Paid	Non-Economic Damages Paid	Punitive Damages Paid	Non-LAE Total	Non-LAE Avg

2014	2	\$1,250,000.00	\$79,296.07	\$2,579,296.07	\$644,824.02	1	\$859,765.36

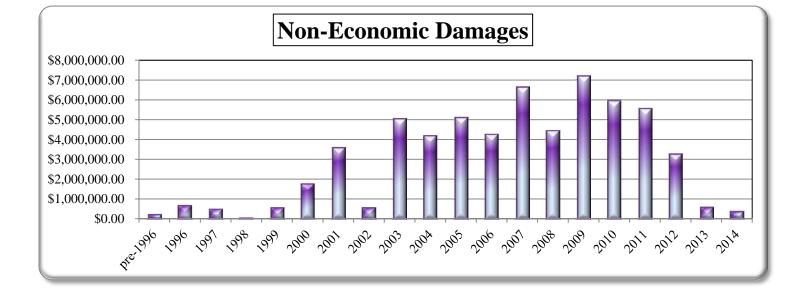

Accordingly, from this dataset the accident year claim incidence is as follows:

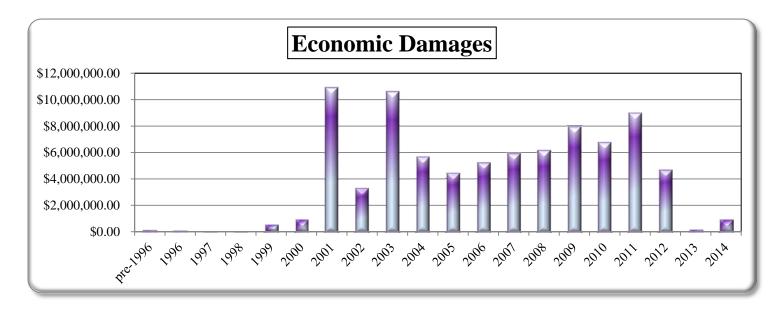

Note from the table and the preceding paragraph, that this incidence frequency does not <u>exclude</u> zero paid claims.

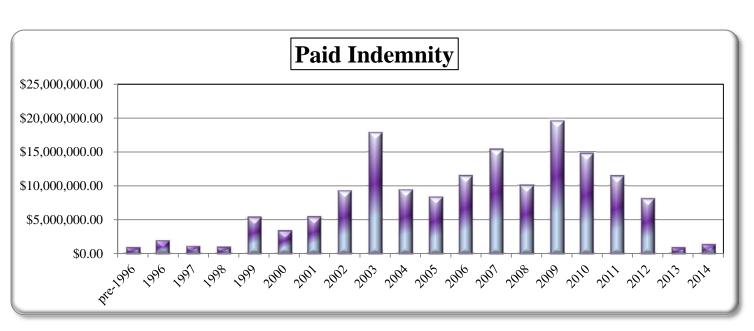

Removing the zero paid claims results in the following substantially similar distribution (*excepting the scale*):

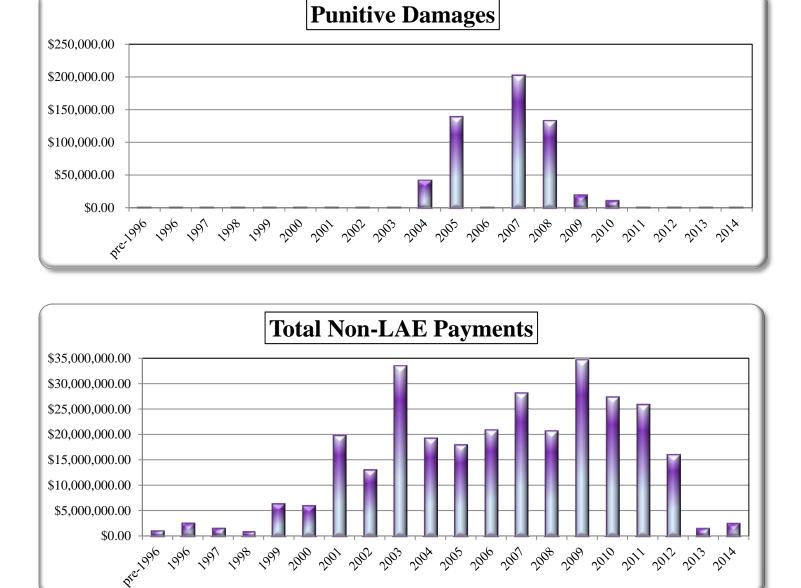

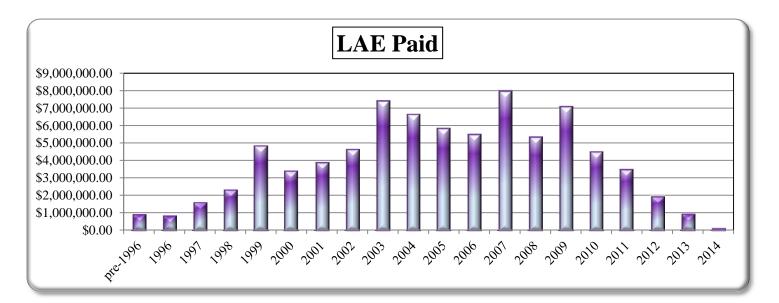

Utilizing the data from the table on the previous page, we can now review the breakdown of payments between indemnity, economic damages, non-economic damages, punitive damages, and loss adjustment expenses over time, again on an accident year basis.

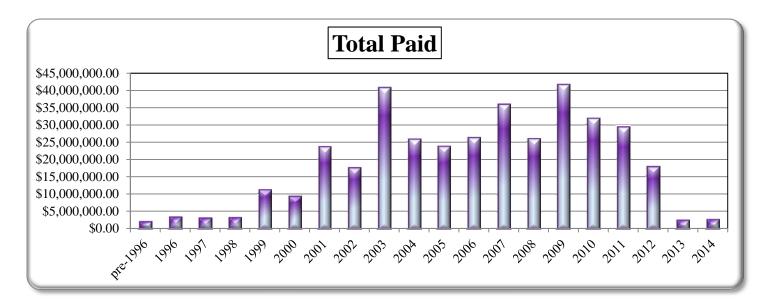

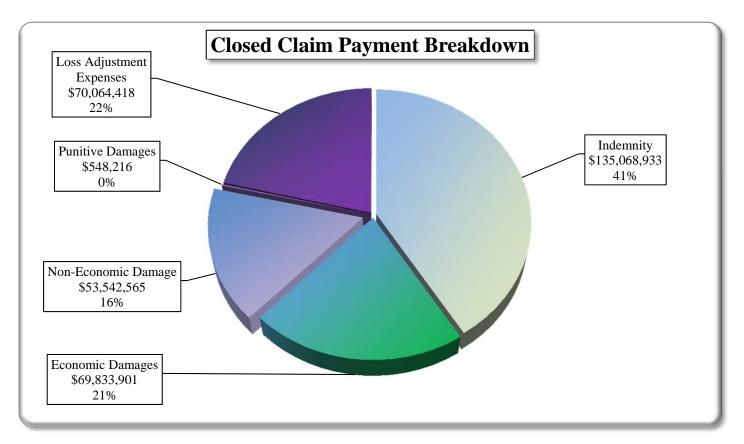

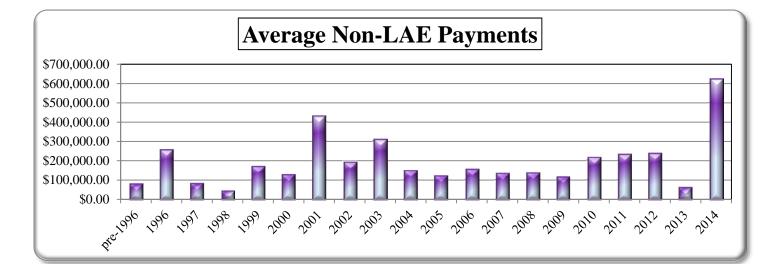

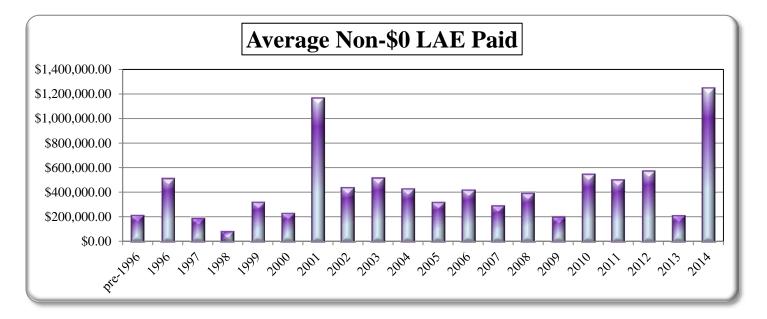

Then from the entire dataset, you can determine how each of the damage types and loss adjustment expenses are related.

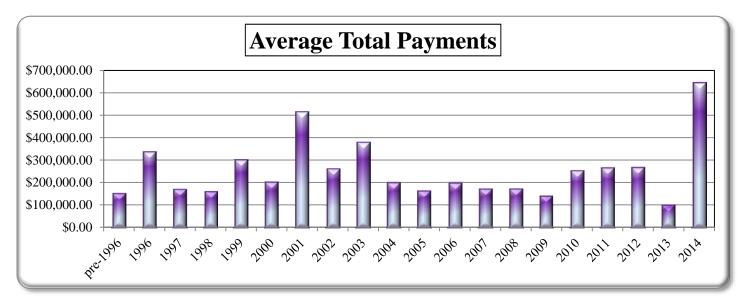

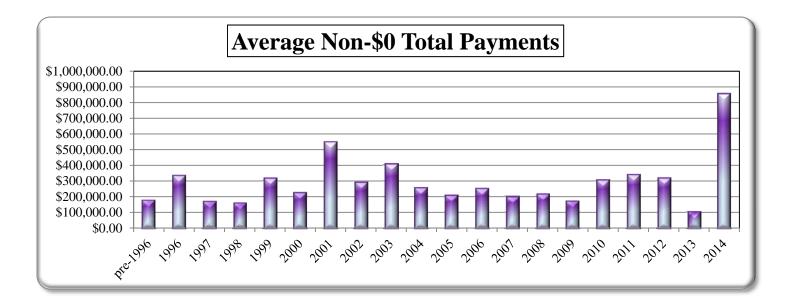

As you may determine, actual punitive damages are shown to constitute a very small portion of total damages, but non-economic damages are shown to be fairly substantial.

Now we will look at the averages.

The pre-1996 to 2014 average non-zero non-LAE payment was approximately \$438,000. When excluding 2014, which had two substantial settlements for a total of \$1,250,000, the average decreases to \$395,000. Being that these data are on an accident year basis, and that medical malpractice is a long tail line of insurance, it may be likely that the experience of later years will be subject to further adverse development.

It should be noted that the data presented in the graphs above, show a distinct increase in average paid claims in 2014. This increase was based on four claims in 2014, which included two claims that were Non-LAE settlements for a total payment amount of \$1,250,000. This reflects the volatility of the WV market which is in part due to the small size of the medical malpractice market. A few large losses can skew the overall data. It should be noted that this data <u>has not</u> been audited.

Similar to the Board of Medicine (BOM) data, we can also consider claim outcomes for those claims under which an outcome was listed (*i.e. Calendar Year basis*).

Closed Year	Judgment	Settlement	Dismissal
2000	1	0	0
2001	0	1	0
2002	0	4	0
2003	2	1	2
2004	1	3	2
2005	1	3	2
2006	8	47	45
2007	12	66	45
2008	9	88	61
2009	9	57	63
2010	9	129	36
2011	5	135	45
2012	4	40	61
2013	6	62	42
2014*	4	59	34
Total	71	695	438
*Ag of Ostober 5	2015		

*As of October 5, 2015

Again we find that most claims are settled (58% vs. BOM 64% since 1993), dismissals constitute 36% (vs. BOM 28% since 1993) and that very few claims receive a judgment 6% (vs. BOM 8% since 1993.) These findings appear to be fairly consistent.

We may also consider costs based upon the outcome type. Specifically:

All	Total Non-LAE Paid	LAE Paid	Count	Avg Non-LAE	Avg LAE
Judgments	\$12,309,992.42	\$11,640,749.07	71	\$173,380.17	\$163,954.21
Settlements	\$241,552,660.90	\$41,297,226.11	695	\$347,557.79	\$59,420.47
Dismissals	\$432,644.17	\$15,010,112.91	438	\$987.77	\$34,269.66

All	\$0 Non-LAE	\$0 LAE	Avg Non-\$0 Non-LAE	Avg Non-\$0 LAE	Total Non-\$0 Avg Expenditure
Judgments	55	2	\$769,374.53	\$769,374.53	\$938,081.03
Settlements	15	90	\$355,224.50	\$355,224.50	\$423,484.38
Dismissals	432	93	\$72,107.36	\$72,107.36	\$115,614.94

Not surprisingly, judgments are most expensive in terms of payouts, followed by settlements and dismissals. Being that the specialty class code of the physician or surgeon was also included in the claims database, we can again test the rating assumption that physician rates should be lower than surgeon rates solely due to risk.

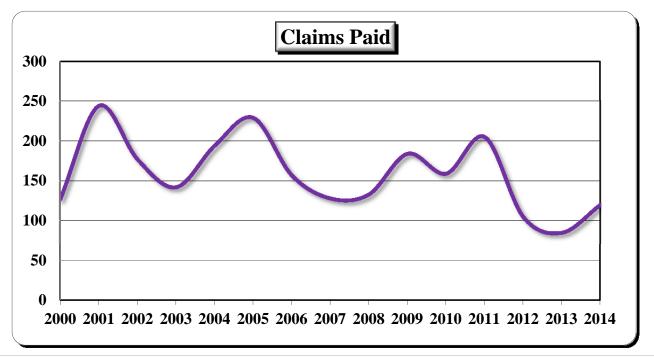

II-E: Paid Data Collection

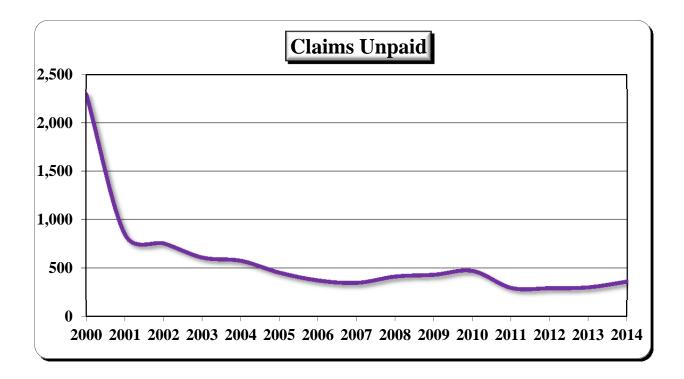

As a further source of information, examining financial statement information provided by insurance companies provides some insight as to the total number of active paid and reserved claims by year. However, these counts do not tie the claims which are either paid or reserved in the reporting year to the year in which the claim initially occurred. For example, a claim payment by an insurer during 2006 may have been for a claim that was filed during 2006 or it may have just as easily been for a claim that was filed in any year prior to 2006.

In looking at the paid and open claim information provided by insurers since 2000 who write malpractice insurance in West Virginia for Physicians and Surgeons, the following aggregated data is found.

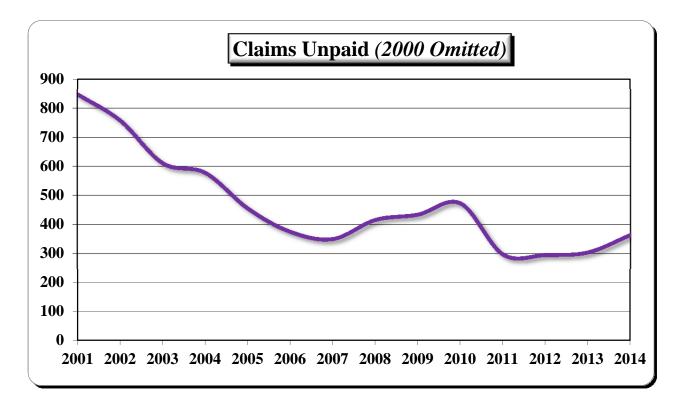

Year	# of Paid Claims	# of Unpaid Claims	Total Claims
2000	127	2,297	2,424
2001	244	848	1,092
2002	177	758	935
2003	142	611	753
2004	194	578	772
2005	229	455	684
2006	157	375	532
2007	128	350	478
2008	133	416	549
2009	184	434	618
2010	159	473	632
2011	205	297	502
2012	105	295	400
2013	85	304	389
2014	120	364	484

Again, graphical linear representations make the data a little easier to interpret:

Looking at only the reserved (*unpaid*) claims by year since 2000 does reveal a general decline with the year 2000 appearing to be somewhat of an anomaly. Eliminating that outlier and rescaling demonstrates a continued favorable trend in the number of open claims by year for the Physicians and Surgeons line in West Virginia.

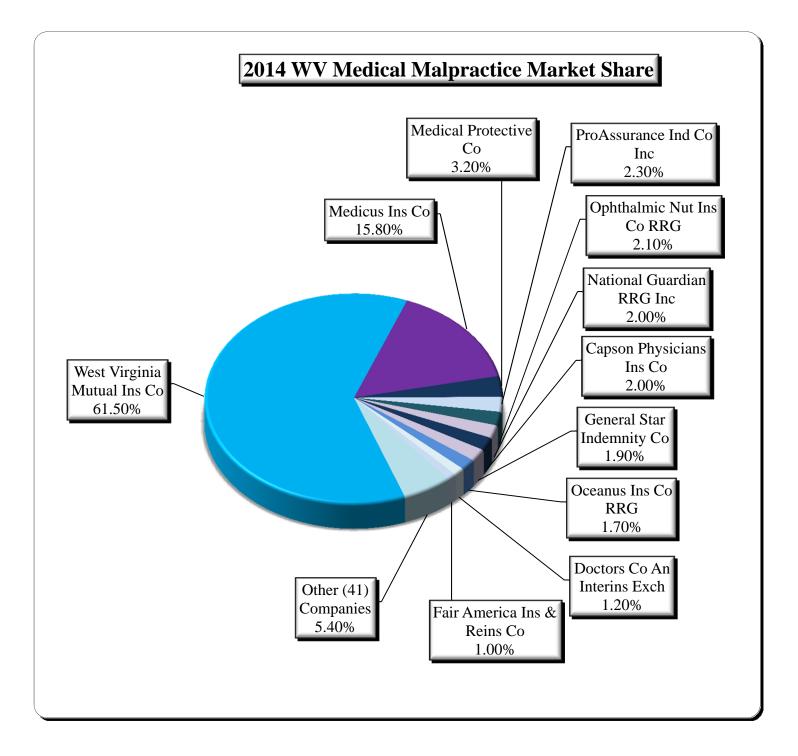

Section III

Review of 5% Market Share Companies

III: Review of Major West Virginia Medical Malpractice Writers

This section of the report reviews the medical malpractice rates and rules of those insurers with 5% or greater market share. Based on admitted Company written premiums for 2014, the West Virginia medical malpractice market currently consists of the following carriers and the subsequent market share for each:

In the table below, two licensed insurers are shown to have met the statutory 5% reporting requirement threshold for 2014 for Physicians and Surgeons; *West Virginia Mutual and Medicus Insurance Company*. Note that as discussed in **Section I**, reductions to the loss reserves from the experience of prior years' will carry forward on a calendar year basis, and can result in aggregate negative dollar values for Direct Losses Incurred and therefore negative loss ratios as well.

	2014 West Virginia Licensed Companies				
(NAIC Database)	Direct	Market	Direct	Direct Loss	Pure
Company	Written	Share	Earned	Incurred	Loss
West Virginia Mutual Ins Co	\$25,553,001	61.50%	\$25,340,227	\$14,043,21	55.40%

Fair America Ins & Reins Co	\$403,782	1.00%	\$394,296	\$88,150	22.40%
Other (41) Companies	\$2,246,792	5.40%	\$2,503,679	-\$2,367,095	-94.50%
Total	\$41,537,054	100.00	\$41,393,407	\$23,121,50	55.90%

Total Physicians and Surgeons Medical Malpractice

However, by looking at the entire market, which <u>includes</u> the Excess & Surplus writers (*i.e. non-admitted insurers including Risk Retention Groups [RRG's]*), the following information is found:

Total Medical Malpractice						
	2	2014 West Virginia Business Written				
(NAIC Database)	Direct	Direct Market Direct Direct Loss H				
Company	Written	Share	Earned	Incurred	Loss	
West Virginia Mut Ins Co	\$25,553,000	35.6%	\$25,340,000	\$14,043,000	55.90%	
Medicus Ins Co	\$6,551,000	9.1%	\$6,441,000	\$7,916,000	122.90%	
Community Hospital RRG	\$5,834,000	8.1%	\$5,834,000	-\$1,128,000	-19.30%	
Mountaineer Freedom RRG	\$5,104,000	7.1%	\$5,104,000	-\$6,974,000	-136.60%	
Liberty Surplus Ins Corp	\$2,353,000	3.3%	\$2,027,000	\$306,000	15.10%	
Health Care Industry Liab Recip	\$1,941,000	2.7%	\$1,781,000	\$953,000	53.50%	
Medical Protective Co	\$1,540,000	2.1%	\$1,373,000	\$658,000	47.90%	
Allied World Surplus Lines Ins	\$1,286,000	1.8%	\$1,326,000	\$159,000	12.00%	
Illinois Union Ins Co	\$1,183,000	1.6%	\$1,183,000	\$437,000	36.90%	
American Excess Ins Exchange	\$1,144,000	1.6%	\$1,031,000	\$400,000	38.80%	
Nautilus Ins Co	\$1,075,000	1.5%	\$1,517,000	\$851,000	56.10%	
Other (103) Companies	\$18,152,000	25.30%	\$18,221,000	\$14,129,000	77.50%	
Total	\$71,716,000	100.00%	\$71,178,000	\$31,750,000	44.60%	

As you can see, the Excess & Surplus lines writers (*italicized above*) have a significant amount of penetration into our Malpractice market. However, considering historical premium volumes it can be found that this penetration has actually declined over recent years:

On a business written basis (*which again includes E&S Companies and RRG's*), the 14-year average market share for the top 10 writers (*by premium volume*) captures about 74.7% of the entire market.

On the next page is a breakdown, by sub-line, for some of the key malpractice writers in West Virginia including those writing on an Excess and Surplus basis.

III-A: Enabling Legislation

The reporting of experience for insurance carriers with 5% or more of the West Virginia Medical Malpractice direct written premium is *required* by:

West Virginia Regulation §114CSR22West Virginia Regulation §114CSR23West Virginia Code §33-20B-6

The regulations and referenced statutes set forth the form in which certain information needs to be reported to the Commissioner. This section of the report is provided to assist the Commissioner in fulfilling obligations under the above regulations and code section and enhance our knowledgebase.

Pursuant to West Virginia Regulation §114CSR23-6, the Commissioner is required to "...evaluate the information reported pursuant to Section 5 of the rule in order to determine whether the filing insurers have fairly and accurately determined the loss experience and loss expense data in the filing."

Per West Virginia Code §33-20B-6(a), the Commissioner is required to "…review annually the rules, rates and rating plans filed and in effect for each insurer providing five percent or more of the malpractice insurance coverage in this state in the proceeding calendar year to determine whether such filings continue to meet the requirements of this article and whether such filings are unfair or inappropriate given the loss experience in this state in the preceding year."

In 1986, the legislature passed §33-20B-7 which required a study of the feasibility and desirability of creating a joint underwriting association or alternative pooling agreement to facilitate the issuance and underwriting of malpractice policies in West Virginia. As nothing in Chapter 33 (*Insurance*) of the Code of West Virginia would expressly prohibit the forming of any such JUA, it can only be assumed that desirability for the same has historically been absent and remains so to this day as no JUA has ever been formed in West Virginia for the purposes of issuing or underwriting policies of medical malpractice insurance.

III-B: Discussion of Market Positions

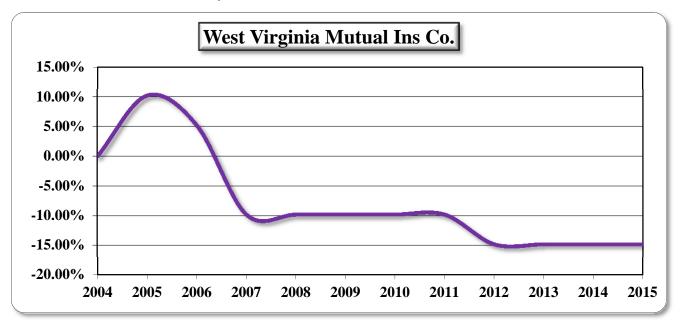

West Virginia Mutual Insurance Company (WVMIC)

Since its inception in July 1, 2004, *WVMIC* has dominated the Physicians and Surgeons market in West Virginia. During the height of the most recent Medical Malpractice "hard market" in West Virginia, a very large number of West Virginia Physicians and Surgeons that were unable to procure coverage via the admitted market were ultimately insured by the State of West Virginia itself utilizing our Board of Risk and Insurance Management (*BRIM—generally the insurer of State owned property and liability exposures*).

As a long term solution to the availability of coverage for Physicians and Surgeons in West Virginia, §33-20F established *WVMIC* and all policies previously insured in the *BRIM II* program novated to the new Company upon inception. *WVMIC* has since added new business and has worked with the Offices of the West Virginia Insurance Commissioner to accommodate difficult situations while maintaining underwriting standards. The rate history of *WVMIC* since inception follows:

2014 Market Share	Company	Effective date	%Requested	% Granted*	WV #:
61.50%	West Virginia Mutual Ins Co	1/20/2015	0%	0%	100030006
	*fka W.V. Physicians Mutual	1/1/2014	0%	0%	100023353
		1/1/2013	0%	0%	100016727
		1/1/2012	-5%	-5%	100011255
		1/1/2011	0%	0%	100006008
		1/1/2010	0%	0%	90918009
		1/1/2009	0%	0%	80903007
		1/1/2008	0%	0%	70918006
		1/1/2007	-15.00%	-15.00%	60915016
		1/1/2006	-5.00%	-5.00%	50826007
		1/1/2005	10.20%	10.20%	41006013
		7/1/2004	initial filing	initial filing	40331017

* Does not include renewal credit adjustments

The company's results continue to be favorable and subsequent changes made to their rating plan establish their current rates below those that were utilized upon inception, as per the graph above. *WVMIC* writes only Physicians and Surgeons coverage and historically had only written within West Virginia. However, having fully repaid their original surplus note (*\$26.1M start-up loan*) back to the State of West Virginia before the end of 2008, they have begun to explore opportunities for expansion into neighboring states. Their medical malpractice market share has declined from an all-time high of 83.69% as of 2008, to 62% as of 2014 (*albeit up from 2013*) on an admitted basis, and was 35.6% on a business written basis. Notably, *WVMIC* paid dividends to its policyholders in 2013 of \$7,538,000 and \$6,250,000 in 2014. They had never paid dividends prior to 2013.

As West Virginia Mutual market share for licensed companies writing Physicians and Surgeons is 61.5% in 2014, their results have a substantial impact on the overall market. In 2014, the pure loss ratio for the Mutual was 55.4% based on the data from the annual statement. This is an increase from the pure loss ratio of 33.17% in 2013. Still, a 55.4% loss ratio is an acceptable loss ratio.

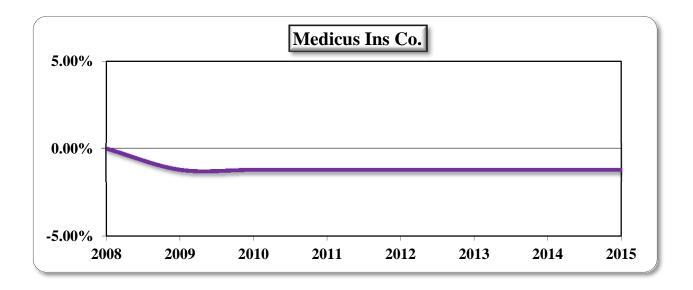

Medicus Insurance Company

Domiciled in Texas and initially incorporated in 2006, *Medicus* provides medical malpractice insurance to physicians, surgeons and related medical service providers. They received their initial Certificate of Authority to write casualty insurance in West Virginia in December 2007 and had gained approval of their first Physicians and Surgeons rate, rule and form filing by March 2008. They are currently licensed in 38 states and did \$63,211,522 in medical malpractice business countywide in 2014. In 2011, *Medicus* was purchased by the *NORCAL Group*. Notably, they became 2nd in overall admitted West Virginia market share by the end of 2009 with 9.17% of the market, and held 15.8% of the market as of 2014 (*up from 13.95% in 2013*). Likewise, they were also 2nd in market share on a business written basis with 9.1%

The pure loss ratio for Medicus in WV over the past two years has been 99.64% in 2013 and 122.9% in 2014. These loss ratios indicate the company is not profitable in WV. The company has not filed for a rate change in the past few years.

The rate history of *Medicus* follows, and likewise includes a graph of their current rates relative to inception:

2014 Market Share	Company	Effective date	%Requested	% Granted	WV #:
15.80%	Medicus Insurance Company	1/1/2016	0%	0%	100033411

Mountaineer Freedom RRG, Inc.

Mountaineer Freedom is a West Virginia domiciled risk retention group which was newly incorporated during 2006. This RRG was formed in order to provide professional and general liability coverage to Wheeling Hospital and its affiliated staff (*which had previously been self-insured*.) As *Mountaineer Freedom* was a risk retention group, they do not have to file rates and consequently no rate history is available for review. Mountaineer ceased to do business on December 30, 2014. The company relinquished their Certificate of Authority. As Mountaineer had 12.35% market share of the Physicians and Surgeons in 2013, their exiting our market is a significant event in 2014.

Community Hospital RRG

Community Hospital RRG, also known as *CHART*, is a Vermont domiciled insurer newly formed in 2002. As a reciprocal risk retention group, it is owned by its member insurers and this includes 8 West Virginia hospitals. *CHART* also operates in Pennsylvania and New York. As a surplus lines insurer (*non-admitted*) *CHART* did not provide 5% market share information and no rate history information is available for this company. In 2014, their market share was 8.1% on a business written basis. They wrote only hospitals.

Liberty Surplus Insurance Corp

Liberty Surplus Insurance Corporation is a member of the Liberty Mutual Insurance Group and is domiciled in New Hampshire. A non-admitted carrier, they held a market share of 3.3% in West Virginia on a business written basis in 2014, and no rate information is available for this company. They wrote other health care providers and facilities insurance which means they wrote no hospitals or individual Physicians and Surgeons.

Health Care Industry Liab Recip Ins

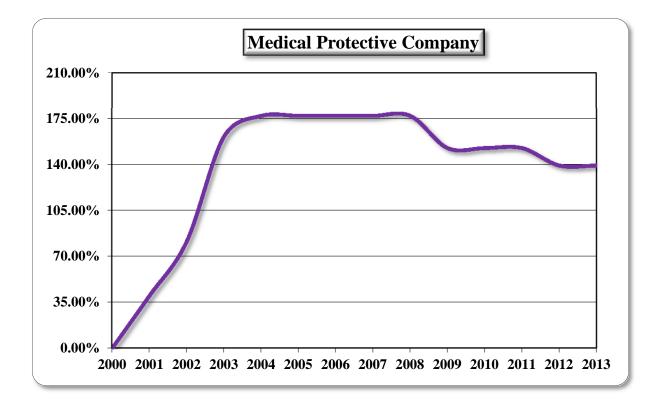

The *Health Care Industry Liability Reciprocal Insurance Company, a Risk Retention Group*, also known as *HealthCap*, is a domestic risk retention group domiciled in Washington, D.C. Formed in 2001, they offer liability insurance products for the senior care industry. As a non-admitted carrier, their market share was 2.7% on a business written basis in West Virginia during 2014. They also wrote other healthcare providers.

Medical Protective Company

Medical Protective Company currently operates as an independent unit of the *Berkshire Hathaway Insurance Group* and is domiciled in Indiana. Having quite a long history, they were first incorporated in during 1909 as the successor to the *Physicians Defense Company* which formed in 1901. Prior to this, they were named the Physicians Guaranty Company which was initially incorporated in 1899. Much more recently, they were acquired by *Columbia Insurance Company* during 2005, which ultimately made them part of the *Berkshire Hathaway Insurance Group*. In 2014, they held a market share of 3.2% on an admitted basis, and 2.1% on a non-admitted basis. Being below the 5% or more threshold in market share for inclusion in this report, no supplementary information was requested from them in 2014. The loss ratio for Physicians and Surgeons in 2014 was 56.1%.

The rate history of their Allied Healthcare Providers product since inception follows:

2014 Market Share	Company	Effective date	%Requested	% Granted	WV #:
3.20%	Medical Protective Co	10/1/2013	0.00%	0.00%	100021941
		1/14/2013	-13.30%	-13.30%	100018489
		10/3/2012	0.00%	0.00%	100017223
		9/1/2010	-24.60%	-24.60%	100003026
		6/9/2006	0.00%	0.00%	60605009
		5/13/2005	15.80%	15.80%	41026015
		1/1/2004	100.00%	80.00%	30825019
		11/4/2003	41.40%	41.40%	30703006
		4/1/2003	160.50%	40.00%	21219013
		1/14/2000	initial filing	initial filing	99110136

Allied World Surplus Lines

This company was formerly *Darwin Select Insurance Company*. The name change to Allied World was effective June 2014. The company was purchased by the *Allied World Insurance* in 2008. The company has had numerous owners and name changes prior. Another non-admitted carrier in West Virginia, they had a market share of 1.8% in on a business written basis in 2014. They did write some Physicians and Surgeons in 2014. They had written premiums of \$255,000 in physicians and surgeons in WV with a loss ratio of 14%.

Illinois Union Insurance Company

The company was licensed to transact surplus lines in WV in 2004. The company is now part of the Ace group. They write hospitals and other medical specialties in WV. The company wrote over \$55,000,000 in medical malpractice business on a countrywide basis in 2014.

American Excess Insurance Exch

They are a Risk Retention Group licensed in Vermont. They have been admitted to do business in WV since 2004. They wrote only hospitals in WV in 2014.

III-C: Rating Plans and Rating Rules

Physicians and Surgeons Programs

Coverage is provided by each of the insurers on a claims-made (*or less frequently, occurrence*) basis. The coverage provided by all plans is relatively standard. Differences may occur in:

- Number of classes
- Assignment of specialties to class
- Definition of specialties
- Class relativities
- Maturity and tail factors
- Discounts offered

None of these differences produce an unfair advantage or inappropriate rating plan. Physicians and Surgeons rating plans are consistent with other industry plans and are reasonable.

Hospital Programs

Each insurer provides coverage on a claims-made (*or less frequently, occurrence*) basis. Variations in the rating plans may occur in the:

- Exposure base
- Experience rating plan
- Schedule rating plan
- Surcharge programs
- Deductible credits
- Increased limits factors

Flexibility in pricing through the use of guide (a) rating (*aka 'refer to company'*) allows underwriters the ability to customize the price and coverage to the risk. Such a feature is common when rating large, unique risks such as hospitals.

III-D: Reconciliation of Filed Information to Rate Filing Information

As required by West Virginia Code §33-20B-3.

- <u>Reconcile the most recent filed information to the experience reported in the rate filings</u>.
 <u>Exhibit I-Sheet 1a 1b</u> provides the premium and loss for each carrier.
 - ✓ WVMIC figures (Exhibit I-Sheet 1a) are noted to have undergone favorable development as the experience of the legacy program which they had inherited (*BRIM II*) is now better known. Pure loss and premium experience while showing a change from 2013 to 2014 still appears to be favorable for WVMIC.
 - ✓ Medicus figures (Exhibit I-Sheet 1b) show the data is increasing in credibility but remain immature and should be anticipated to undergo further development. Volatility is still an item of concern due to the small volume of business written by *Medicus* at this time. The experience over the past few years has not been favorable.

2. <u>Reconcile the experience in the filed information to the most recent experience reported in the company's financial statements.</u>

✓ Exhibit VI provides the comparison of Annual Statement information with the filed 5% Report information for all companies. The results are demonstrated to wholly reconcile for all companies participating in the report.

3. <u>Compare the assumptions underlying the filed information to the most recent rate filing assumptions</u> <u>or other information.</u>

- Exhibits II-V provides the key assumptions underlying the most recent rate filings to the filed 5% Reports.
 - ✓ Exhibit II compares budgeted expenses.
- ➤ WVMIC has a permissible loss ratio of 53%. They have a fixed expense load per policy of \$5,184. They have a 2.3% profit and contingencies loading factor.
- Medicus has a permissible loss ratio of 63.8%. They include a 5% profit and contingencies load in their filing.

To comprehend the reasonability of the Expense Provisions being employed, we can look at the most recently available data (*2014*) from A.M. Best's Aggregates and Averages. These data demonstrate averaged expenses for all writers of the Medical Malpractice line of business in the country.

				Total
		Other Acquisition	General	Underwriting
Company	Commissions	Expenses	Expenses	Exp
WVMIC	7.5%	12.4%	11.7%	35.5%
Medicus (NORCAL Group)	7.8%	7.1%	7.0%	24.6%
Industry Average (A.M. Best)	6.3%	5.1%	9.8%	23.7%

- ✓ **Exhibit III** compares investment income provisions.
- ➤ WVMIC's net investment gain has become rather substantial as their surplus has grown. The rate of return assumed as underlying their profit and contingencies load remains absent as it has since 2005.
- Medicus' net investment gain is shown to be quite modest and notably is well exceeded by the assumed rate of return underlying their profit and contingencies load. This should be monitored, but does not provide significant concern.
 - ✓ **Exhibit IV** compares pure premium trend assumptions.

The pure premium trend assumptions of each of the companies included in the report demonstrate no areas of concern.

✓ Exhibit V compares incurred loss development factors.

Although it is on a somewhat later basis (*18 months to ultimate*), the incurred loss development factors utilized by *WVMIC* appear to be somewhat low. The factors employed by *Medicus* appear reasonable and similar to previously provided information.

4. <u>Is the filed information filled out correctly and accurately?</u>

 ✓ It is clear that each company has attempted to provide accurate information in response to the 5% Report data call.

5. Does the filed information support our conclusion on the rates as of 12/31/14?

Exhibit VII provides rate comparisons for a number of specialties utilizing the filed rates of several companies writing physicians and surgeon's coverage in West Virginia as well as those filed by a rating organization. Note that in review of the by-company rate histories as provided in Section III-B above, that by premium volume rates have generally remained stable in West Virginia after having declined during the most recent prior years.

III-E: Analysis of Rate Filings

West Virginia Mutual Insurance Company

The company most recently filed for and received approval of a 0.0% change to their base rates to become effective on January 1, 2015. The policy renewal credit changed from 15% to 12% which has a +3% premium impact to policyholders. As noted earlier, the company has returned dividends in both 2013 and 2014 which offset previous adjustments to the renewal credit. They likewise filed for and received approval of a 0.0% change to their base rates effective January 1, 2014 as well as January 1, 2013. An overall decrease of 5% was filed for and approved effective January 1, 2012. Additional "no change" (0%) filings were approved for January 1, 2010, 2009 and 2008. In January of 2007, the company filed for and received approval of an overall rate level decrease of 15%; this followed a similar overall decrease of 5% in 2006. As indicated in Section **III-B**, the Company's current rates are about -15% below that of their initial rate filing which became effective on July 1, 2004.

Medicus Insurance Company

The company most recently filed for and received approval of a 0.0% change to their base rates to become effective January 01, 2015. Prior to this filing, "no change" filings were approved for 2014, 2012 and 2011, as well as September 2010. *Medicus* filed for and received approval of a -1.2% overall filing effective as of October 1, 2009. That filing was subsequent to their initial rate filing in the state which became effective on March 20, 2008. As also indicated in Section **III-B**, the Company's current rates are about -1.2% below that of their initial rate filing.

III-F: Investment Portfolio

Exhibit III presents a comparison of net investment gains and investment income provisions from rate filings. In earlier years, investment gains had generally declined but are now showing upward movement. As indicated above *WVMIC* is not accounting for investment income offset within its future rate filings and this should be amended.

A review of each of the three reporting companies Annual Statement information demonstrates that investment yields are relatively modest as a percentage of assets invested, but are otherwise performing reasonably well in today's investment marketplace.

III-G: Overall Medical Malpractice Market (Annual Statement Line of Business 11)

Although sub-lines of medical malpractice (*e.g. physicians, hospitals, etc.*) are considered individually in the Appendix of this report, a detailed view of the <u>entire</u> medical malpractice line of business on an admitted company basis for 2014 provides the following: (*Companies under \$5,000.00 omitted*)

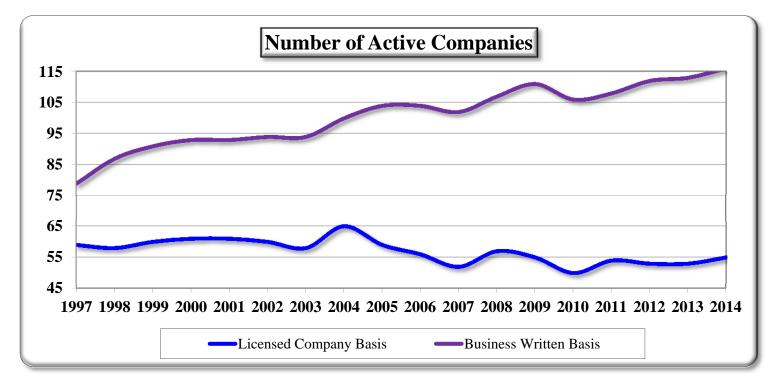

Company Name	\$ Written	Market Share	\$ Earned	Losses Incurred	Loss Ratio

20 Other Companies	\$4,589	0.0%	\$250,295	(\$2,567,131)	-6.2%
Totals 52 Companies	\$41,537,054	100.0%	\$41,393,407	\$23,121,505	55.9%

Note that only a very small number of companies (52) are reporting any activity in West Virginia for 2014, and that our domiciled mutual company (*West Virginia Mutual*) has a material concentration of total market share.

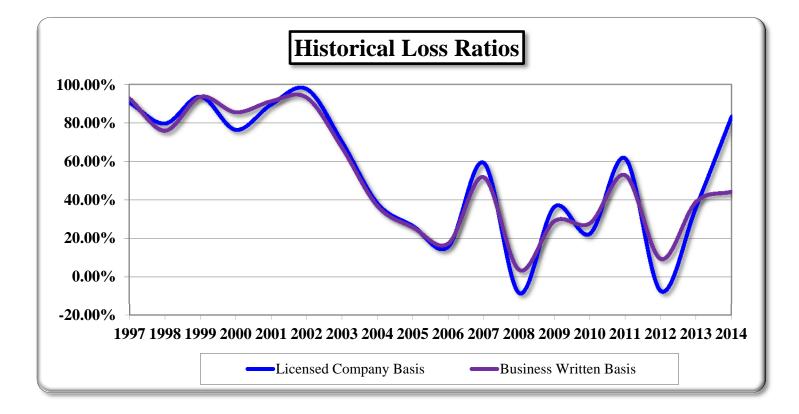

Looking back on these considerations historically, on an admitted basis as well as on a business written basis, the following summary information can be found.

Licensed Company Basis								
Company								
	Count	Loss Ratio						
1997	59	90.69%

Section IV

Other Sources of Data

IV: Other Sources of Data

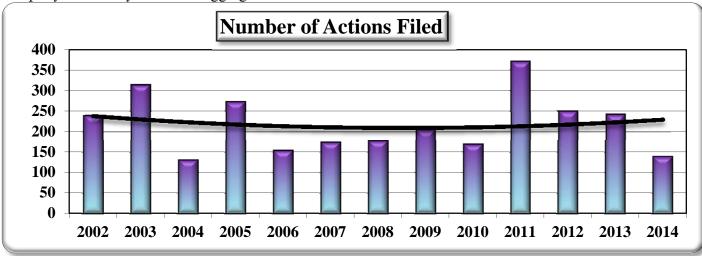

IV-A: Medical Liability Fund Data

Becoming effective on January 1, 2002, *HB 601* increased the fee associated with filing a medical professional liability action in part to support the Medical Liability Fund created pursuant to §29-12B-1 et seq. As part of this change, a portion of the moneys received for each action filed are received by the State Treasurers Office. The data associated with these transactions can be examined to establish the total number of actions involving Medical Professional Liability filed in West Virginia per year and as well the total number filed per county of venue. It is noted that due to the particular timing involved in posting these transactions, the data appears to lag by a period of approximately one month from the actual date that the action in consideration was actually filed in a court of law.

Examining this data in aggregate, the following information is noted:

	# of Filed					
Year	Actions					
2002	239					
2003	315					
2004	130					
2005	273					
2006	154					
2007	174					
2008	178					
2009	205					
2010	169					
2011	372					
2012	250					
2013	242					
2014	139					

Up until 2011 which appears to be a bit of an anomaly, a general decline in the number of filed actions per year had taken place. The polynomial trend (*black*) line in the graph below demonstrates that the number of filed actions per year is fairly flat in the aggregate.

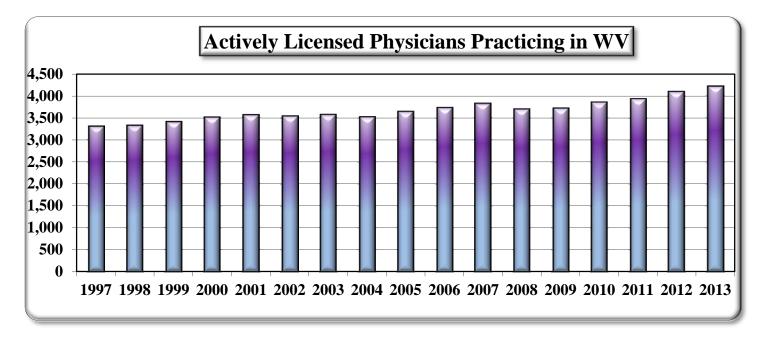

IV-B: Board of Medicine Data

Obtaining data from the West Virginia Board of Medicine regarding physician licensure in West Virginia, the following history is observed.

West Virginia Board of Medicine Licensure Data		1998	1999	2000	2001	2002	2003	2004	2005
Actively Licensed Physicians (M.D.)		5,107	5,251	5,212	5,246	5,199	5,182	4,873	5,058
Inactively Licensed Physicians	937	896	869	920	947	901	631	853	757

Medical School Faculty Limited Licenses							2	4	4

West Virginia Board of Medicine Licensure Data		2007	2008	2009	2010	2011	2012	2013	2014
Actively Licensed Physicians (M.D.)		5,379	5,594	5,776	5,857	5,962	6,020	6,282	6,636
Inactively Licensed Physicians	734	692	650	627	628	628	632	613	484
Actively Licensed Podiatrists (D.P.M.)	105	103	104	101	111	101	103	100	101
Inactively Licensed Podiatrists		16	16	15	14	15	15	12	12
Actively Licensed Physicians Practicing in WV		3,837	3,708	3,730	3,864	3,946	4,111	4,231	4,327
Actively Licensed Podiatrists Practicing in WV		75	73	64	68	72	74	65	67
Physician Assistants (P.A.)		542	580	604	658	671	732	781	821
Medical Corporations	521	513	502	500	498	495	498	487	432
Professional Limited Liability Companies		47	50	50	53	59	79	100	98
Special Volunteer Medical Licenses		13	16	15	16	17	16	15	11
Medical School Faculty Limited Licenses		4	2	3	4	3	3	3	3

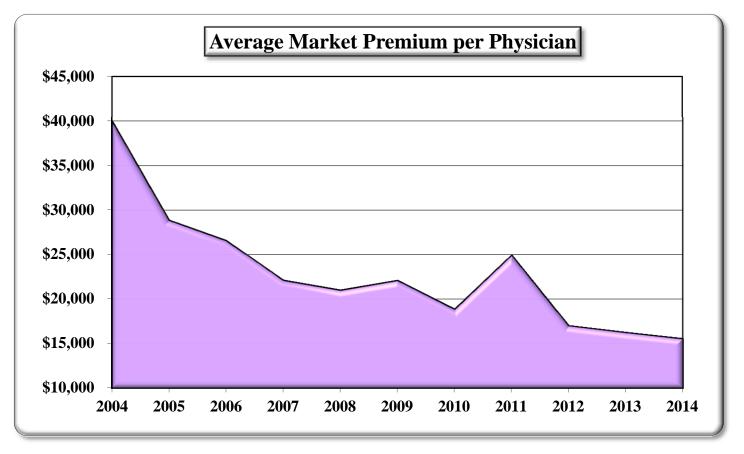

Looking at only licensed physicians that report as actively practicing in West Virginia, an overall favorable increase in physicians is observed for the State.

Tying the active physician licensure data to historical premium data for the physician sub-line of medical malpractice, we can also estimate how the cost of malpractice premiums might be spread on average throughout our physician population.

	Business Written Basis										
	P&S Written	P&S Written Physicians Practicing Board of Risk Insured									
	Premiums	in WV	Physicians	Physician							
2004	\$104,451,130	3,532	923	\$40,034.93							
2005	\$77,791,000	3,650	955	\$28,864.94							
2006	\$76,117,773	3,743	881	\$26,596.01							
2007	\$63,070,586	3,837	988	\$22,137.80							
2008	\$55,572,225	3,708	1,065	\$21,026.19							
2009	\$53,932,735	3,730	1,291	\$22,112.64							
2010	\$49,672,860	3,864	1,237	\$18,907.44							
2011	\$64,270,333	3,946	1,371	\$24,959.35							
2012	\$43,657,853	4,111	1,547	\$17,027.24							
2013	\$42,760,927	4,231	1,602	\$16,265.09							
2014	\$41,537,054	4,327	1,658	\$15,562.78							

Note the significant decrease in average premium occurring from 2004 to present.

Note also that the "averaged" premiums above are not necessarily representative of the premium that a given physician doing business in West Virginia may actually be paying, as that premium would be influenced by the physicians specialty (*e.g. physician classes versus surgeon classes*), the maturity of their claims-made policy, the limits of insurance afforded, presence of rating credits and debits, etc.

However it is clear from the representative information above that, on average, malpractice rates in West Virginia are stable.

Section V

Summary Observations

V: Summary Observations

- In 2014, medical malpractice insurance in West Virginia continued to demonstrate favorable results, concluding with an overall loss ratio of 44.6%; this being for all companies and types of medical malpractice. The premium volume remained relatively the same. The Physicians and Surgeons business only had a loss ratio of 55.9%, which was up slightly from the 2013 ratio of 49.3%. The premium volume remained relatively the same.
- Countrywide net operating results for all property and casualty lines of business in 2014 were at 92.0%.
- During 2014 medical malpractice rates in West Virginia remained relatively unchanged. *WVMIC* held the substantial majority of the market share and initiated no overall rate changes. *Medicus* had the second greatest market share and also proposed no rate changes during 2013. *Medical Protective Co (whose market share was below the 5% threshold at 2.83%)* actually decreased their rates by -13.3% in 2013 and made no changes in 2014.
- One of the key elements underlying the historical adverse results for West Virginia has been a very high level of defense costs. Since 2004, loss adjustment expenses in West Virginia have exceeded 50% of incurred losses during the years 2004, 2006, 2007, 2010, and again in 2013. Although influenced by the large reduction in loss reserves during 2008 and again in 2012, in total West Virginia loss adjustment expenses were 68.17% of loss over the 2004 to 2014 period, whereas on a countrywide basis the loss adjustment expenses were 55.8% of loss. Even though averaging out the large reduction in loss reserves would render us comparable to the countrywide figure, volatility in this area is an item of concern for the future.
- In the admitted market for physicians and surgeons, the top five malpractice writers in West Virginia by premium written accounted for 84.8% of the entire admitted market (*previously* 87.5%), and the continued favorable decline in market concentration ratios demonstrates an increase in competition. In the entire market (*admitted and non-admitted*), the top five writers account for 63.3% of the market (*previously* 69.98% in 2012).

- The small size of the medical malpractice marketplace in West Virginia, with only 4,327 active physicians or surgeons practicing in our State, inherently lends itself toward volatility, as can be demonstrated by simply considering the 2006 through 2014 results (*with Direct Loss Ratios of 15.8%, 59.4%, -8.4%, 36.6%, 22.5%, 61.61%, -7.3%, and 36.49% 55.8% respectively*).
- An analysis of West Virginia Board of Medicine data revealed the following:
 - ➤ The number of paid claims was shown to have generally declined in West Virginia, although there was an increase from 2013 (87) to 2014 (119).
 - The total number of claims in 2014 (119) is about a third of that experienced in 2001 (375 or 31.7%).
 - ▶ Roughly 33% of claims were dismissed in 2014, which is comparable to prior years.
 - > Approximately 8% of claims filed actually go to court.
 - Most claims are settled outside of court, approximately 60%.
- A review of the Medical Liability fund data indicates that the number of filed actions in West Virginia decreased over 2013.
- Examination of the 5% market share companies data as required by §114CSR22, §114CSR23, and §33-20B-6 notes several expense issues, but found no areas of material concern.

Glossary of Terms

<u>Accident Year Experience:</u> Measures premiums and losses relating to accidents which occurred during a 12month period. Ties loss dollars to the year in which the premiums were earned.

<u>Admitted Market:</u> Comprised of only Insurance Companies that are specifically authorized and licensed to write business in a given state. Contrast this with the market as a whole which would also include non-admitted insurers who write in a given state on an Excess and Surplus lines basis. (i.e. Business Written Basis.)

BRIM: West Virginia Board of Risk and Insurance Management

BRIM I: Term to identify the medical malpractice program for teaching schools and their physicians. This program is administered by *National Union Fire of Pittsburgh* (an *AIG* subsidiary) under a fronting arrangement. *AIG* assumes no real risk under this arrangement; they simply issue the policies on *AIG* paper and are fully reimbursed by BRIM for loss and other expenses. They receive a percentage of premium for providing this service. BRIM I policies are written on an occurrence basis.

BRIM II: Term to identify the medical malpractice program for private physicians and hospitals. This program was administered by *Marsh*. BRIM II was written on a claims-made basis. All BRIM II business novated to the *West Virginia Mutual Insurance Company* (*WVMIC*) on July 1, 2004.

<u>Calendar Year Experience:</u> Measures premiums and losses entered on accounting records during the 12month calendar. Losses may be from prior years.

<u>Claims-made Coverage</u>: A policy which provides coverage <u>only</u> when a claim is made during its active policy period or any automatic or purchased supplemental extended reporting period. For example, generally a claim that is made in the current year will be charged against the current policy even if the injury or loss giving rise to the claim had occurred many years in the past. However, a claims-made policy will also have a set specific retroactive date, prior to which any occurrence giving rise to a claim will not be covered. From a pricing perspective, claims-made coverage is much more straightforward since it strictly limits the insurers' exposure only to unknown future liabilities (called "incurred but not reported" claims). Contrast this coverage with "Occurrence Coverage". Claims-made coverage became a more accepted approach towards writing long-tailed exposure lines like medical malpractice and products liability during the mid-'80's after its introduction by the Insurance Services Organization (ISO).

<u>Combined Ratio</u>: The percentage of each premium dollar a property/casualty insurer spends on claims and expenses. A decrease in the combined ratio means financial results are improving; an increase means that they are deteriorating. When the ratio is over 100%, the insurer has an *underwriting* loss.

Direct Combined Ratio: The sum of expenses and incurred losses combined versus earned premiums. On a direct basis, this ratio does not take into account any adjustments for reinsurance recoveries or payments for reinsurance coverage.

<u>Direct Loss Ratio</u>: The ratio of incurred losses to earned premium. The direct loss ratio is in contrast to a 'net loss ratio' which compares losses after reinsurance recoveries to earned premiums after paying for reinsurance.

Earned Premium: The pro rata portion of written premium which represents the expired portion of the insurance contract. For example, an annual policy of \$100 written on July 1, 2001, assuming a calendar year accounting period, will be shown on the company's books as being partially earned in 2001 and 2002, i.e. fifty dollars earned in 2001 and fifty dollars in 2002.

<u>Guide (a) rating (also known as 'refer to company' and 'judgment rating'):</u> (a)-rating is typically used for large and/or unique commercial risks. It is generally provided for in the rules section of a company's underwriting manual. When a risk, such as a hospital, qualifies for (a)-rating, the actual price for the risk will be determined by an experienced underwriter. In this situation, actual filed rates are superseded by the underwriter's judgment.

Incurred Loss: A monetary payment and/or reserve on the part of the insurance company to cover claims of the insureds which are payable by the terms of the insurance contract.

Investment Gain/(Loss): The investment gain relates a company's total *return on all invested funds* (premiums, reserves, and equity) to the calendar year earned premium. Thus this figure will usually be quite substantial for a long-tailed line like medical malpractice which requires considerable funds to be held in reserves and surplus.

Loss Adjustment Expense (LAE): Costs on the part of an insurance company to cover expenses incurred in settling their claims. This expense can be divided into two types: Allocated Loss Adjustment Expenses (ALAE aka Direct Cost Containment Expense [DCCE]) which are those expenses such as outside attorney and necessary court fees which can be directly tied to a specific claim, and Unallocated Loss Adjustment Expenses (ULAE aka Adjusting and Other [AO]) which are insurance company general claim department expenses, etc. and are not directly allocated to a particular claim.

Loss Development Factors: Designed to account for the subsequent development of losses or those that are late in being reported in order to attempt to reasonably estimate ultimate settlement amounts. Loss development factors are frequently utilized in those lines of insurance where claims develop slowly or are commonly reported later than the year in which the original premiums were earned. Prospective loss development factors are based upon changes in the relationships of historical claim data at specific and set periods during their subsequent development, such as after 12, 24, and 36 months, etc.

Occurrence Coverage: A policy that pays claims arising out of incidents that occur during the policy term, even if the claims are filed many years later.

<u>Operating Profit/(Loss)</u>: Bottom-line profit or loss of an insurance company. Calculated by adding investment income to underwriting profit/(loss).

<u>Premium-to-Surplus Ratio</u>: The ratio of written premium to surplus. This ratio is commonly used in the property/casualty insurance industry as a measure of financial strength or to indicate the degree to which a company is leveraged. In Medical Malpractice insurance, this ratio is often less than one-to-one.

<u>Punitive Damages:</u> Damages awarded over and above compensatory (economic) damages to punish a negligent party because of wanton, reckless, or malicious acts or omissions.

<u>Pure Premium</u>: The portion of the total premium only needed to pay expected losses. The pure premium does not take into account the portion of premium necessary for company expenses (e.g., commissions, taxes, etc.)

<u>Risk Retention Group:</u> Liability Insurance Companies which are owned by their policyholders. Membership is limited to people in the same business or activity which exposes them to similar risks. The purpose is to assume and spread liability exposure to group members and to provide an alternative risk financing mechanism for liability. (*See also the Federal Liability Risk Retention Act of 1986*.)

Severity: Average loss per claim.

<u>Surplus Line</u>: (aka Excess Line) A risk or part of a risk for which there is no market available through the original broker or agent in its jurisdiction. Therefore, it is placed with non-admitted insurers on an unregulated basis, in accordance with the surplus or excess lines provisions of the state law.

<u>Underwriting Expense</u>: The expenses which are realized by an insurance company in acquiring, selecting, and servicing policies. Underwriting expense includes agents' commissions, general administration expenses, inspection and bureau expenses, and taxes, licenses and fees. It does not include any loss adjustment expenses.

<u>Underwriting Profit/(Loss)</u>: The remainder when loss, loss adjustment expense and underwriting expense are subtracted from earned premium income.

Written Premium: The total premium from all policies with effective dates within a given time period.

These rates are a starting point for rating a physician. Rates may be further adjusted by other rating plans.

*ISO only files loss costs and increased limit factors. Affiliated Insurers may use ISO as a basis for their rates.

An underwriting expense load of 25% was used to convert ISO loss costs to rates.
